AUJET AUJETST AUJETPL AUJDW

Series Automatic Booster System

The AUJET AUJETST AUJETPL AUJDW automatic booster system consists of a JET water pump, an airtight pressure switch, a pressure tank, a pressure gauge, and a connecting flexible pipe, make the pump automatic, more convenient to use. The pressure tank with a non-toxic rubber membrane, or called pressure vessel, has been pre-filled with air pressure of about 0.12 Mpa before leaving the factory.

These systems give suitable mains water pressure as required by modern domestic applications, and industrial applications, and will ensure enough water to supply all user outlets.

Almost all other pump models can be installed and become automatic booster systems, especially the centrifugal series water pumps.
